

## Automatic coding and pre-magnetization equipment

### Introduction

This equipment is mainly used for coding and pre-magnetization of small magnets; fast loading coding and magnetization (non-saturated) to improve production efficiency. It is widely used in daily production of magnet factory.

### Advantageous features

- Fast loading and coding
- No noise and vibration during magnetization
- Products attract each other after magnetization
- Small equipment footprint

### Technical Parameter

- ◆ Suitable products: Small magnets are 4~25 mm long, 2~20mm wide, and 1~8mm thick
- ◆ Feeding method: Vibratory disk loading
- ◆ Discharging method: manually deload
- ◆ Productivity: 300 slices/min (double shaker)
- ◆ External Dimensions: 1200X800X1400(mm)(No vibrating disk.)

### Key processes

1. Vibratory table for fast loading.
2. Products are coded at the coding station.
3. Magnetize the product in the magnetization area after printing.
4. Magnetized products are arranged and pushed out, manually collected manually.
