

Automation Magnetizing Machine

Introduction

This equipment is suitable for saturation magnetization after pre-magnetization of small products, fast magnetization, high efficiency, widely used in the daily production of magnetic material factory.

Technical Parameter

- ◆ Suitable products: pre-magnetized small products
- ◆ Product Size: Length 4~50mm Width 2~40mm Thickness 1~10mm
- ◆ Feeding method: manually upload
- ◆ Discharging method: manually deload after products reaching a certain length
- ◆ Production efficiency: 300 slices/min (manual handling of materials)
- ◆ Magnetization effect: saturation magnetization
- ◆ External Dimensions: L1200*W700*H1400(mm)

Key processes

1. Manually put the pre-magnetized products into the designated position on the working table and press the start button.
2. The roller mechanism clamps the product and pushes it towards the coil for a set stroke, and then magnetizes it when it is in place.
3. The roller mechanism continues to feed the product to the coil and the magnetized product is pushed out of the coil.
4. Repeat the above action, magnetization completed products to the receiving mechanism, in the weight of a certain period of time after the manual receipt of materials.
